

## SMART IRRIGATION MONTH At Fulton County

Fulton County Water Resources has lots of tips for using water wisely — saving you money and protecting our water supply for generations to come!

Install a rain shutoff switch. These inexpensive sensors can be retrofitted to almost any system and help compensate for natural rainfall by turning off your system in rainy weather.

*(Mandated per O.C.G.A. §12-5-6, January 1, 2005)*

Use different spray heads in different zones so you can turn zones on/off as needed.

Fixed Spray Heads

Rotor Heads

Rotary Nozzles

Switch to Drip! - Drip irrigation can apply water directly to the roots of shrubs and trees, where it's needed.

Inspect your irrigation system monthly—leaking systems, broken or clogged sprinkler heads will cost you money!

The Irrigation Association named July as “Smart Irrigation Month” to increase public awareness about simple practices and innovative technologies homeowners, businesses and property managers can use to protect their investments and save water. Visit their website at: <https://www.irrigation.org/>
